DWA_07.4 Knowledge Check_DWA7

_____

1. Which were the three best abstractions, and why?

_____

2. Which were the three worst abstractions, and why?

My worst abstractions were the use of query selectors instead of functions. This made a few parts of my code repeated and increased the amount of code written. There were a number of query selectors so they all group into this category.

_____

3. How can The three worst abstractions be improved via SOLID principles.

These abstractions can be improved by understanding which parts of them can be used as functions that can improve the manner that the code is written and put together.

_____
